# Directive and Meeting Notes

## Executive Committee Meeting Minutes

- **Date:** 19.06.2026
- **Chairperson:** Executive Director of Regional Infrastructure & Planning
- **Attendees:** Representatives from Sunshine Coast Council, City of Moreton Bay, City of Gold Coast, and Ipswich City Council.

## Discussion Summary & Strategic Directives

### ▼ 1. Cross-Jurisdictional Reporting Mandate (Directive 2026-A)

- **Context:** The Sunshine Coast and Moreton Bay regulatory representatives noted that under the Environmental Protection Act 1994, physical site audit records must remain strictly isolated by municipal boundaries to prevent legal cross-contamination.
- **Directive:** The data engineering team must implement an automated code mechanism that programmatically groups and splits raw master sheets by regional zones before publishing report books.

### ▼ 2. Multi-Tiered Spatial Risk Weighting (Directive 2026-B)

- **Context:** The City of Moreton Bay highlighted an influx of infrastructure activity, noting they currently monitor double the industrial footprint (12 records per sector) compared to smaller local tracking frameworks like Ipswich City Council (6 records per sector).
- **Directive:** The automated reporting dashboard must scale its data point volume proportionally to ensure resource allocation matches the high-density infrastructure tracking demands of larger councils.

### ▼ 3. Secure Dissemination Protocol (Directive 2026-C)

- **Context:** Gold Coast and Ipswich council auditors voiced concerns regarding data leaks if reports are sent via unencrypted or manual channels.
- **Directive:** All processed compliance documentation must bypass manual attachments. Reports must be pushed directly through a secure cloud mail-relay utilizing programmatic authentication handshakes.

## ▼ Action Item Matrix

|   | ≡ Action Item ID | ≡ Assigned Task                                                                                              | ≡ Target Council / System | ≡ Assigned Owner  | ≡ Progress Status |
|---|------------------|--------------------------------------------------------------------------------------------------------------|---------------------------|-------------------|-------------------|
| 1 | ACT-0601         | Implement a dynamic array looping script using <code>.unique()</code> to automatically isolate zone strings. | Core Backend Pipeline     | Systems Developer | Completed         |
|   |                  |                                                                                                              |                           |                   |                   |

|   |          |                                                                                                           |                                                     |                    |             |
|---|----------|-----------------------------------------------------------------------------------------------------------|-----------------------------------------------------|--------------------|-------------|
| 2 | ACT-0602 | Map the specific statutory frameworks (e.g., Local Law No. 7 for Waste Management) into the data schemas. | <u>Council Bylaws</u><br><u>&amp; Zoning Portal</u> | Compliance Analyst | Completed   |
| 3 | ACT-0603 | Establish <u>try-except</u> blocks to catch data formatting anomalies without halting execution.          | Exception Logging Layer                             | Lead Integrator    | Completed   |
| 4 | ACT-0604 | Schedule a live system demonstration walkthrough with regional risk management stakeholders.              | External Relations                                  | IT Consultant      | In Progress |

▼ The Executive Note

Governance Compliance Sign-off

These directives form the operational boundaries of our regional GRC ecosystem. Any updates to the automated scripting parameters must explicitly map back to the minutes and directives approved by the joint council committee above to maintain an unbroken audit trail.
